

CUTTING PROFILES PC

The cut profile is a versatile solution for adjusting the height of the polycarbonate panel on site.

Cut the panel at the desired height and add the tape to the PC sheet. Then a U-profile is put on to create the frame. The Kit Tape for cutting PC panels are available in the standard panel widths from 200 mm up to 1,500 mm and in any RAL colour upon request.

FACTS

ART. NO	COMPONENTS
