

FIXED BIKE HOOKS

By hanging the bikes in fixed hooks on the wall, the entire bike room is used more efficiently compared to using traditional bike racks on the floor. There will be more space and better order!

With a fixed wall hook, it is easy to plan the placement of each bicycle and can with advantage be used in spaces with a lot of pipes and ventilation.

Install on beams with c/c 400 mm and preferably at two height levels. The hooks are made of 12 mm lacquered steel wire.
